RAPIDOBJECTS

Data Mart Planning and Design Service
Rapid Start

The business environment today is more competitive than ever. Companies that outpace the competition do so by providing superior service to their clients while reducing costs and increasing profitability. Today's most successful businesses attain leadership by making full use of all the information resources available to them, whether internal or external. They also optimize presentation of information to key decision makers throughout the enterprise. Where appropriate, they provide critical information to partners and customers as well.

Rapid Objects assists clients in developing strategic plans, project plans, and architectures that enable quick and affordable access to the information that is critical to informed business decisions. Applying their extensive expertise and proven tools and approaches, the firm helps businesses maximize the success of their business intelligence implementations.

To reduce costs and shorten the planning cycle, Rapid Objects offers Rapid Start Planning and Design services. Rapid Objects leads the process providing templates for critical plan elements and sample plans of successful Business Intelligence projects. The client validates the designs and formulates the company-specific planning information. Meanwhile, Rapid Objects provides feedback and coaching.

When the plan or design is complete, Rapid Objects and the client meet in a strategic review session to discuss and revise the documents.

Rapid Objects works with clients in one or more of the following critical aspects of Business Intelligence projects:
